

## HOOKS

Global Drilling Solutions Inc can provide premium-quality rotary hook for heavy-duty drilling requirements.

The hydraulic snubber, a shock absorber that eliminates damage to tool joint threads from the bouncing action produced when "breaking out" stands coming out of the hole.

The massive flexible pin connection between the hook and the shank keeps the hook load properly balanced, thus eliminating unequal loading, either on the ears of the elevator or under pipe coupling and tool joints.

The hook positioner provides faster, safer operation and cuts down round-trip time. When going in the hole, the positioner automatically rotates the elevator into the correct position for the Derrickman to catch the next stand of pipe. The positioner also prevents the hook and elevator from being rotated by the "spin-up" of drill pipe going in the hole.

### Features Include:

- Hydraulic snubber
- Flexible pin connection
- Designed to A.P.I. Standard 8A/8C
