

UTB HOOK/BLOCK

Global Drilling Solutions Inc can provide UTB type traveling blocks of various sizes which are suitably used in the drilling industry for the smaller sized Drilling & Workover Rigs.

The UTB hook/blocks are designed in accordance with API 8A/8C with load rating methods and recommendations. Five sizes are available with static load ratings from 900kN to 4500kN. The compact, streamlined design increases clearance and prevents interference with the mast or derrick and fingerboard. Heavyweight construction allows to fall free and stable when traveling empty.
